EDITOR'S LETTER

Exit... stage left

ONE NOTICEABLE TREND THAT HAS CAUGHT OUR ATTENTION LATELY is the recent exodus of investors from the market. In our feature article, we delve into the reasons behind this, exploring the various factors that have prompted investors to exit the market.

On a more positive note, we are thrilled to highlight the incredible achievements of women who are bridging the gender gap in property investing. Our second article profiles three inspiring women who have broken barriers, shattered stereotypes and made their mark in a traditionally male-dominated area. We hope their stories inspire and motivate our readers, regardless of their gender, to pursue their property investment dreams.

We all know location plays a crucial role in property investment so we explore the pros and cons of investing near a train station - just how close is too close for comfort?

With the deadline to submit tax returns fast approaching, we speak to one investor who shares her top tips for maximising her refund.

Enjoy the issue!

Capital city rents jump 17% in 12 months

MEDIAN ADVERTISED RENTS across all dwellings nationally rose 2.0% in the June quarter to $520 a week according to the latest report from Proptrack.

That brings rents up 11.8% compared with the 2022 June quarter when the median national rent was $465.

But rents across the combined capital cities have seen the sharpest increase, up 5.8% in the June quarter to $550 a week. That brings rents up a "staggering" 17% compared to a year earlier.

Units in Sydney and Melbourne are responsible for much of that growth, up 19% and 17.5% respectively over the past year.

Median unit rents are now 19% higher than before the pandemic in Sydney and 10.6% higher in Melbourne.

PropTrack economist Angus Moore said a supply and demand imbalance is to blame.

"Rental markets continue to be extremely challenging for renters, with rents surging across much of the country amid strong demand and very limited availability," he said.

"This is especially true in Sydney and Melbourne, where weekly rents have increased significantly after falling in these cities during 2020 and 2021."

Sydney property prices rising by $4k a week

DESPITE PREDICTIONS OF MASSIVE PROPERTY PRICE FALLS, home values have climbed for a fourth consecutive month as the slow but steady rebound continues, according to new data.

Since finding a floor in February, national home values rose 1.1% in June, decelerating slightly from a 1.2% gain recorded in May according to CoreLogic's national Home Value Index.

However, the market still remains -6.0% below peak levels recorded in April 2022. That's the equivalent of the median dwelling value being -$45,771 below a peak of $768,777.

Every capital city with the exception of Hobart saw property prices rise in June, with Sydney once again leading the way.

Sydney's median property value rose 1.7% in June - in dollar terms, that's an increase of $4,262 a week.

Over the quarter to June, Sydney dwelling values rose 4.9%.

Home values in regional areas also trended higher, though at a softer pace than their capital city counterparts.

Regional property values saw a 0.5% rise in June, marking four consecutive months of growth.

Rate rises and rental reforms see investors flee

INTEREST RATE RISES AND RED TAPE is leading investors to flee the market, new research suggests.

CoreLogic research released on Thursday found there has been an uptick in listings activity from residential property investors.

As of May, total new listings added to the market were -20% below the previous decade monthly average across Australia, while new investor listings were only -2.9% lower than the previous decade monthly average.

In Sydney, Melbourne and Perth, investor listings for May were actually higher than the previous decade average.

The research found the proportion of investor listings on the market in May shot up in inner city areas, which are traditionally hotspots for investors.

Listings from property investors is highest in inner Sydney, where the decade average of new listings coming onto the market from investors is 38%. In May, listings surged to 57%.

CoreLogic head of research Eliza Owen said there could be a number of factors why this is the case, including interest rate rises.

"Based on average interest rates for investors, we estimate mortgage costs on a $500,000 loan will have increased $860 per month, to $3,213," Ms Owen said.

"While rents have risen at a record pace over the past few years, they generally have not risen as much as mortgage costs on a new loan.

"If the interest burden is becoming too high amid an already high inflationary environment, investors may be looking to offload their investment."

Investment activity plummets 17% in a year

A LEADING PROPERTY INVESTMENT ADVISOR says Australia's rental crisis is entrenched for years to come given the investor finance analysis released by the ABS for May.

Colin Lee, property investment adviser and founder of Inspire Realty, said the data has revealed investment loan numbers across the nation have plummeted by 17% – or from 20,541 to just 16,900 in May this year – according to the latest ABS lending indicators.

"The data shows everyday Australian investors are fleeing real estate. We are in for more than a generation of homelessness if something isn't done soon to address rental undersupply," Mr Lee said.

"What's most disturbing is the lead in time for adding new housing supply to the market is years, not months. As such, we need to make decisions now to address future demand for housing which is increasing at an exponential rate."

Mr Lee said the blame is to be placed squarely at the feet of policy makers across all levels of government for driving investors out of the market.

"Successive policy settings across all tiers of government have seen these investors leave the market in droves over the past decade," he said.

"Whether it's depreciation allowances, the ramping up of land tax and stamp duty, higher interest rates or even anti-investor rhetoric, people are finding the idea of residential investment too risky and uncertain."

'Bye, bye': Property investors pack up their bags in droves

Reduced landlord rights, rising interest rates, and increased compliance costs – mix all these ingredients together and you'll have landlords running for the doors. That's the new reality, as **Hanan Dervisevic** reports.

THE QUESTION ON MANY LANDLORDS' LIPS REMAINS THE SAME: 'Do we stick it out or sell to ease the stress?'

The reality is, rising interest rates, legislative red tape, and the cost of debt-eroding rental yields have forced some investors to pack their bags and leave the market.

The number of investors buying dwellings has been falling since early last year. In March 2022, the number of loans secured for investment property purchases peaked at 21,663. As of April 2023, the volume of new investment loans had fallen around 42% to 12,562.

Unfortunately, no one is immune to the current, crazy financial environment.

Your Investment Property surveyed 2,400 YIP Advantage members between 21 April-12 May and found that the number of property investors looking to sell was up 44% over the previous quarter (36% compared to last quarter's result of 25%). More ➤

➤ than half of investors said they were looking to offload their property/s within the next six months. While the market is crying out for more investors given low vacancy rates and growing rents, half of respondents are steering away from purchasing another property in the foreseeable future.

Buyer's Agent Chris Clarke said property investors are leaving the market at what would typically be viewed as a great time to get in.

"Over the last two years we've seen rental prices increase by 20% to 30% and property prices have remained stagnant over that time," Mr Clarke told *Your Investment Property Magazine*.

"This means that yield return has increased whilst capital growth has remained stagnant.

"With constant talk of legislation and reforms occurring, including the recent stop to rental bidding in NSW, many investors are holding off on making purchases whilst they assess if legislation is going to continue to be placed in favour of tenants."

For those that are feeling the pressure financially, offloading an investment property can provide a sense of relief and quite frankly, is a much easier decision than giving up the family home.

Interest rates dampen rental returns

No one is safe from rising interest rates, not even property investors - especially those whose rental returns are falling short of covering mortgage repayments. Those bearing the brunt may have bought investment properties when rates were at record lows and rental payments easily covered costs. But that's not the case anymore.

Since the start of the rental upswing in September 2020, mortgage payments for new investment mortgages have on average, increased faster than rents, prompting some investors to quit the scene, so to speak.

Using CoreLogic's national median dwelling value and national median rent as an example, weekly rent values have gone from $455 to $583 between September 2020 and May 2023. Weekly payments on a variable-rate investment loan on the median dwelling value rose from $443 to $830 per week. In this scenario, the difference between weekly rent and a new investment mortgage repayment has gone from $12 at September 2020, to -$247 by May 2023. On average, mortgage costs have risen much faster than rent values due to a record hike in the underlying cash rate, and dwelling values still being quite high relative to where they were in September 2020.

Tristan Larkin from Tomii Buyers Agents said the interest burden has become too high for some investors amid an already high inflationary environment.

"Some investors are starting to feel the pinch of the rising interest rates, especially if they've got two or more properties as this is essentially affecting them twice as much," Mr Larkin told *Your Investment Property Magazine*.

"Properties that were positively geared a couple of years ago could be negatively geared today and properties that were slightly negatively geared two years ago could be significantly negatively geared today. That's the reality."

Speaking to *Your Investment Property Magazine*, CaptainFI, a retired international transport pilot from Australia who has his own blog on financial education and independence, said the uncertainty of interest rates has pushed him to consider selling his two duplexes.

"A big focus of mine for investments is being able to create a semi-passive cash flow to fund an early retirement or probably called a semi-retirement as I've been running my website business for a little while now," CaptainFI said.

"The property itself has been a big amount of effort and money (so many hidden fees) and has become a source of stress.

"It's not that 'badly' negatively geared but it's this constant kicking of the can down the road. Yes, it's costing money now but it is growing in capital appreciation so it will be worth more tomorrow. But tomorrow is eventually today, right?

"With the risks of more and more rate rises making it cost even more to hold and making the market unsteady and potentially causing the property to lower in value, it might seem like a sensible option to just cut the losses so to speak. Sell the property and walk away with a tidy profit."

To weather the storm that is the 12 rate rises seen over the last 15 months, there, unfortunately, will be a percentage of landlords who have to sell because they've exhausted all means of discretionary income. And given there could be another rate rise or two to come, the final straw may emerge in the near future for some.

Rental reforms are a big 'no-no'

Tightening regulations and changes to tenancy laws aren't doing property investors any favours either.

The *Your Investment Property* survey found more than a third (35.1%) of investors are likely to pack their bags and leave the market due to rental price increases being capped at once per year in Queensland from 1 July 2023.

Limits to rental increases can prevent rental rates from fully reflecting increases in mortgage repayments, which is likely to translate to further losses for investors.

The survey revealed 67% of property investors don't believe the restriction strikes the right balance between protecting tenants and ensuring a fair return for landlords. A further 62.3% said the Queensland rent limits will reduce their ability to maximise yield from their investments.

But it's not just Queensland in the firing line. Victoria has also imposed some questionable laws on investors.

Introduced in the Victorian Government's State Budget, the tax-free threshold for land tax will be reduced from $300,000 to $50,000 and the rate will increase by 0.1% of the value over $300,000. Those who pay land tax will also incur a temporary fixed charge starting at $500 for land worth up to $100,000 in value, while more expensive landholding will incur a $975 fixed fee.

The temporary measure will come into effect from 1 January 2024 and last for the next 10 years.

Mr Larkin said recent conversations with property investors show just 'how sick they are of Victoria' and the policies brought in by the government.

"Some property managers have told me directly that they have lost a lot of investors on their books as they can't afford the upkeep of their properties," he said.

"With the new increase of land tax and the recent addition of the electrical safety rental minimum standard in March 2023, it has become a lot more expensive to hold an investment property, especially if you own multiple in Victoria."

Cash out now while you can

Mr Larkin said some investors that aren't necessarily in a spot of financial difficulty are selling as a way to cash out the gains they may have experienced over the last few years.

"If you bought a property five to 10 years ago, it's likely that you have achieved some decent capital gains," he said.

"Some investors are of the opinion that the market will not rise any more in the short term and would rather sell now so they don't have to experience the higher interest rates and buy back in when interest rates are coming down in the future."

CoreLogic Head of Research Eliza Owen echoed a similar sentiment.

"A key driver why investors are selling might be capital growth," Ms Owen said.

"If you look at a city like Perth, where the portion of investment sales surged in mid-2020 and remained high ever since, this may reflect investors finally getting some pay-off after a long period of decline in home values for much of the 2010s."

The future looks uncertain

Why are investors leaving the market? While the list is endless, it ultimately does come down to individual circumstances. Some properties are losing money, essentially putting strain on family cashflows and leading to portfolio re-evaluation or even panic-selling. An anticipated recession may also have some investors running for the hills alongside rising costs of materials/labour which affects maintenance prices.

There's not just one ingredient fuelling the fire, there's a multitude. Tie all that in with rising interest rates and you have investors taking that extra step to saying 'bye bye' to their property/s. YIP

Mind the *gap!*

Women in Australia continue to trail men in the property investment stakes but there are women narrowing the gender gap, **Emma Duffy** reports.

MORE THAN 150 YEARS AGO IN AUSTRALIA, women couldn't vote, couldn't access the contraceptive pill (unless they had a husband), couldn't drink in public bars, and had little to no abortion rights. When you think about how the world looks today in 2023, we've progressed in leaps and bounds. But we still have a way to go.

According to CoreLogic's Women & Property Report 2023, men have the highest level of investment property ownership in Australia at 36.3%, compared with 29.5% of investment properties that are owned by women, and even higher than joint male-female ownership of investment properties (34.2%). Taking into account joint male-female ownership, males were identified as owning almost 7% more of the investment properties analysed in Australia.

The report also found that based on average weekly earnings data and the median Australian dwelling value in January ($708,613), it would take 8.3 years for a man to save a 20% deposit and 9.4 years for a woman to save the same amount.

The Annual Property Investor Sentiment Survey 2022 conducted by the Property Investment Professionals of Australia (PIPA) found only 27% of property investors surveyed were women while 71% were men.

A recent Victorian parliamentary inquiry found only about 34% of women who separate manage to own a home within five years and only 44% do so within 10 years, with stamp duty a major reason why. Divorced women were also three times more likely to rent at age 65 than married women, the inquiry found.

PIPA Chair and co-author of The Female Investor – Creating Wealth, Security, & Freedom Through Property Nicola McDougall said publicity surrounding the gender pay – and superannuation – gaps was starting to hit home for women of all ages.

"When we released our book last year, we did get pushback from some people who questioned why it was written specifically for women, which was annoying but, alas, not surprising," Ms McDougall said.

"The reasons we wrote the book for women was because of the lack of female voices and authors in the property investment space, but also because only 27% of women identify as investors – and now we have learned that if a woman gets divorced, she has less than a 50/50 chance of continuing to be a homeowner – which is appalling."

Real Estate Institute of Queensland (REIQ) CEO Antonia Mercorella said gender pay figures hid the stark reality of poorer financial results for women throughout their lives.

"According to the Workplace Gender Equality Agency, Australia's national gender pay gap is 13.3% – similar to what it was three years ago," Ms Mercorella said.

"To put this into perspective, women are earning on average about $253.50 less per week than men, which over the course of a year adds up to about $13,000.

"Over a decade, the gender pay gap may mean that women are more than $131,000 worse off than men financially, with that figure rising to more than a quarter a million dollars over 20 years."

Ms McDougall said in the past, women may have been nervous about buying a property as a home or an investment - but that's quickly changing.

"Society has changed significantly since the days when women stayed at home to look after their children while their husbands were the main breadwinners," she said.

"However, more and more research and lived experiences are proving that the financial outcomes for women are generally going to be poorer than men – and especially for those who separate or divorce."

A report by ME Bank found that women are a growing force in the property market, with the number of single female home loan applications increasing during the strong property price growth in 2021.

Women are also borrowing more, with the average loan size for a single female mortgage increasing by 7% to $411,752 in 2021.

And while the CoreLogic report mentioned at the top paints a fairly bleak picture, it also showed the gender gap is narrowing - albeit slowly - 28.3% of property purchases in 2021 were made by women, up from 27.4% in 2020.

Sisters are doing it for themselves

"Buying an investment property is only for men"… said no one with a shred of credibility, ever. We spoke with three women who have both feet firmly planted in the world of property investing to find out how they got started, what they've learnt along the way, and what advice they would give to other women wanting to start their own property investment journeys.

Rosella Mangion

One woman closing the gender investment gap is Rosella Mangion, who began her investing journey six years ago when she bought an apartment in Paris while on maternity leave.

"As an Australian living in France and working for an international organisation, I did not benefit from French retirement nor Australian superannuation. I saw property investment as a sure way to securing my retirement," she explained to *Your Investment Property Magazine*.

"I purchased at an opportune moment as three months after I purchased, the market value in Paris increased by 11%. Timing is everything."

A major benefit of buying in France is that interest rates can be fixed for the life of the loan.

"I was able to borrow 100% of the loan amount. The interest rate was also very low at 1.57% p.a. for 25 years."

With two investment properties under her belt (she bought a property in the Sydney suburb of Kensington in January this year), Rosella is now considering purchasing her third investment property.

"I'm looking to purchase another small apartment in Paris towards the end of this year to release as a short-term rental to maximise my opportunities during the 2024 Paris Olympics," she said.

Rosella says her investing strategy has been to pick properties in good locations, snag them for a good price, and hold onto them for capital growth.

"Location is so important and I always try to find the best deals in the hotspots. I've tried to purchase at a lower price point or at market value, never above, with a view to profiting as soon as I buy," she said.

"I also only rent out my Paris apartment to expats as I'm sure of the rent being paid. The apartment is neutrally geared and will soon be positively geared, with the tightening of the rental market in Paris.

"In Sydney, I plan on renting out my apartment after occupying it for two to three years. My long-term strategy is to hold onto the apartment for at least 10 years with a view to achieving a higher capital gain upon sale."

Despite now amassing an impressive investment property portfolio, Rosella says she faced gender discrimination when she was beginning her investing journey.

"I would go into the bank in person with my baby and was dismissed each time, and told to save and then come back and make an appointment," she said.

"This was interesting to me as I had enough income to support the loan I required. No one from the bank spoke to me about my options."

She also experienced gender discrimination when renovating an investment property.

"I couldn't sign the contract without my husband for my kitchen renovation - they wanted to discuss everything with my husband to ensure he agreed with everything right down to the design and colour choices, even though I was the legal owner of the property and dealing with the renovation myself."

But she says women shouldn't let this deter them.

"Find another way and find people willing to help. Use the skills you have to negotiate, stay calm, do your research, and know what you want as you'll be tested and will have to prove yourself a little bit more," she said.

It's also important to keep emotions out of the buying decision.

"Try not to overpay for a property, even if you'll be living in it. You don't have to fall in love with the property - you just need to choose the best investment property, so go with location, price, and rental return in the area.

Think like a man.

Belinda Coniglio

Belinda Coniglio began her property investing journey in 2005 at the age of 23 with only $175 to her name.

"I didn't really save - I dived right into buying a studio apartment in the inner city suburb of Mount Lawley in WA for about $125,000. I think there was less regulation by the banks in those days," she told *Your Investment Property Magazine*.

"It was a studio and I remember members of my family laughing and saying it was a 'bedroom in the city'. I even had a bed-warming party! I had lived in Italy on student exchange and saw that we (in Australia) don't need the 'white picket fence' dream."

The studio apartment doubled in price thanks to the Perth property boom in the early-mid 2000s.

"With a light refresh, I doubled my money when I sold the property in late 2006."

But she says it hasn't always been smooth sailing after subsequently making a bad investment decision.

"I learned a lot from my first investment. Not all investments will double in price within a year - that was the product of unique market circumstances.

"I then invested with my brother and his fiance thinking I was helping them get into the market but they could have done it without me, and it was messy to get out of. This set me back a couple of years."

As a result, she recommends thinking seriously about who you get into bed with.

"I am a bit of a lone wolf like that as I like to do things solo. I am only having to consider the legal implications of a relationship now that I have a child with my partner. He owns half of our family home and this is the first time I've owned something with someone. I recommend you seek legal advice to protect your finances."

Belinda says she was driven to get into property investing so she could make money and have the freedom to travel - which she was able to do after buying a two-bedroom apartment in Inglewood WA when she got back on her feet.

"If I look back now, it still was probably not the best time to buy, however, it made sure that I was in the market while I was living interstate and travelling. A combination of Airbnb and rental tenants meant that I paid the mortgage and continued to be very free."

In 2014, Belinda purchased an investment property in Brisbane when prices were relatively low for apartments.

"It meant that I was paying the mortgage instead of paying rent. I only sold this recently, after almost nine years to use the capital for my current home - an off-the-plan purchase that I signed in 2020 to capitalise on COVID building grants.

"In the meantime, in March 2022 I also picked up another investment property in Mount Lawley which I have refreshed and intend to flip.

"I love buying little apartments for a light refresh to realise capital growth."

Anissa Cavallo

An advocate for empowering middle-aged women to achieve financial independence through property investment, Anissa began to use property for investment purposes in her late 30s.

"I was a full-time executive (and breadwinner) with two very young children and I was burnt out. I worked in financial services and realised that our mantra was retirement and yet I was way off replacing my own income," she told *Your Investment Property Magazine*.

"Since I had properties (that I hadn't really thought about, I had just bought them because my parents told me I should), I decided to sell them to increase my financial portfolio to see if I could take some time off.

"I noticed that I had made more money out of my two properties in a few years than my other investments would make in many [more years]. I had a light bulb moment and decided that there was something in this."

With SQM Research, she built a research methodology and followed exactly where it told her to invest.

"We built the research to find the areas most likely to produce the best growth areas without the risk. So I invested in areas that I didn't want to live in and that my friends told me were not growth areas," she said.

"Interestingly I still get that when I give advice to clients - sometimes their accountants, mortgage brokers, planners etc say 'these areas won't go up' and they reel off the areas near them. But they are wrong. Everything we think we know about property is often so wrong."

She says her investment strategy is to focus on growth, not gearing.

"I invest where the growth is: population growth and affordability for the masses is a major consideration. I also look only at maximising land. I don't invest in apartments or townhouses. My portfolio is focused on growth, not positive gearing because the yield will never match the amount of money I can make from growth."

She says she's experienced some gender discrimination, including being threatened by builders.

"One builder that didn't want to pay us a fee that was due told me he knew where I lived and was coming over to 'sort me out'. I was a bit rattled but realised it was all bravado."

But most of her experiences have been positive.

"I work for myself and choose who I align with. Many of them are men (as there aren't enough women in the industry) and the ones I work with are incredible. Many have become my friends. They love working with women because we approach things differently," she said.

> *"For every d*****bag in the industry, there are also lots of impressive men that really support women."*

For other women wanting to start their own property investment journeys, she says the time to start is now.

"There is never the right time. If you have a job or a will to work, you can buy a property. Don't miss out. There are so many ways to get into property - don't listen to the bank, brokers or advisers that tell you that you can't because I promise, you can," she said.

"If you are so inclined, get some advice. While most property will make you some money over time, the right property will make you triple that in a shorter amount of time."

But perhaps her biggest piece of advice is to hold onto properties long-term.

"Never sell. NEVER – hang onto that baby for dear life." VIP

Tax-time triumph: How this investor is maximising her returns

If you have an investment property, there are lots of strategies you should be aware of that could minimise the amount you're handing over to the ATO each year. **Harry O'Sullivan** spoke to Monica Rouvellas, owner of three investment properties, who talked *Your Investment Property Magazine* through her top tips for navigating tax time.

MONICA ROUVELLAS IS AN ENTREPRENEUR with a background in business law, who started investing in property in her late twenties.

"It was always something I wanted to do, but whenever I went to see a broker, they would say you need to save more, or you need a bigger deposit," she told *Your Investment Property Magazine*.

"Finally, I was able to buy my first property going halves with my brother, we did some renovations and built up equity and a good rental yield as well."

These days, she owns three rental properties, including complete ownership of the original property after buying out her brother's share. She has taken advantage of her knowledge of tax rules to maximise her portfolio's profitability.

Tax time

Monica avoids negative gearing because she wants her taxable income to be as large as possible to maximise her borrowing power. Come tax season, she has a simple goal: break even.

"Any profit I make on the property, I try to offset with expenses, so I claim everything from the interest on the loans to repairs to loss of rent," she said.

She said this means she is usually very open to any requests tenants might make about adjustments to the property. Every repair or installation is an adjustment after all, which helps reach the magic breakeven point, so she thinks investment property owners shouldn't hold back.

"I had one tenant ask for CCTV cameras, which I had no issues putting in because of the tax deduction," she said.

"There's a lot of hype at the moment about landlords not doing repairs. I think it's very silly for landlords not to do that considering most of the property maintenance is a taxable deduction."

Monica also said lots of landlords make the mistake of assuming they can only recoup expenses from lost rent through insurance.

"A lot of property owners think you can't claim loss of rent, and try to get landlord insurance to cover that.

"I learnt the hard way with landlord insurance that you can only claim after four weeks of lost rent.

"No insurer will pay you out for the initial four weeks. If the house is empty for six weeks, you claim the last two weeks on insurance and the other four weeks at tax time."

You probably know repairs and maintenance on an investment property can be claimed as a tax deduction, but there are several other eligible expenses you might not have thought about including in your tax return.

Tax Deductions you might be forgetting about

PROFESSIONAL FEES: The fee for anyone you hire for services concerning your investment property is deductible. If you commissioned a conveyancer when you were buying or selling, or hired an accountant to manage your income from investment property, you can claim the entire portion that regards your investment properties.

INSURANCE: The cost of keeping your investment property insured, including for building and contents, public liability and even loss of rent, can be claimed at tax time.

FEES: It's pretty hard to forget to claim $10,000 worth of interest, or whatever the property management company charges. However, there are several smaller fees you might have paid without thinking too hard, which are also ➤

➤ deductible. Loan application charges and landlord or homeowner association membership fees are good examples.

DEPRECIATION ON FIXTURES: Over time, carpets, blinds and other fixtures will deteriorate. While you can't hold your tenants responsible for natural wear and tear, you can make a claim each year according to a depreciation schedule as these fixtures gradually lose value.

Trusts

Monica is one of many investors who buys property through a trust. For the uninitiated, a trust technically refers to the relationship between the 'trustee', who owns and controls the assets in the trust, and the beneficiaries, for whom the trust is set up. The assets are owned on behalf of the beneficiaries and the income is held for them. Helpfully for investors who set themselves up as a trustee, the trustee can also be a beneficiary (just not the only one, because this would defeat the purpose of the trust). For tax purposes, a trust is treated as a separate tax-paying entity. Monica uses a discretionary trust, which means the trustee (her) controls the distribution of income to the beneficiaries.

For investors, there are a bunch of benefits to buying properties through a trust, including asset protection, discounts on capital gains tax and flexibility at tax time.

Why property investors like trusts so much

ASSET PROTECTION: The trustee is the owner of all the properties in the trust. This means that if one of the beneficiaries who receives rental income runs into financial or legal trouble, the property is protected from creditors or the law.

FLEXIBILITY WITH DISTRIBUTIONS: Monica said one of the main reasons she buys property through a discretionary trust is the flexibility this offers come tax time. The trustee can distribute income to the beneficiaries however they choose, which can be helpful when the tax man comes calling. Imagine a married couple (we'll call them Richard and Judy) who own an investment property through a trust. Both are beneficiaries and Judy is the trustee. Judy earns a lot more than her husband and is several tax brackets above him. Therefore, she might decide to disproportionately appropriate income from the property to Richard, so that less of it is taxed.

CAPITAL GAINS TAX CONCESSIONS: Under certain conditions, the ATO allow reduced or eliminated capital gains tax for small businesses, which trusts can be eligible for. There are a few criteria you'll need to meet, but it's absolutely worth exploring.

Property tax

The sand in the bed of any property investor, minimising your land tax obligations is another important way to maximise your income. As Monica explains, there's no one size fits all strategy since rules vary from state to state.

"[Investors should] structure [their] portfolio differently according to the state you are buying in," she said.

"For example in NSW, you could use either a unit fixed trust or a special company set up to minimise land tax once you have a few properties in the portfolio."

There are a few broad ways to structure your portfolio to bring down your land tax obligations. Firstly, you could simply choose properties in states that charge less of a land tax imposition - in the Northern Territory, for example, where land tax doesn't exist. Should you buy properties across different states, your landholdings in each taxable area will be far less than your overall portfolio, so you will be charged a lot less than if you had all your eggs in one basket.

If you are investing in one particular state, you could consider spreading your portfolio across several different entities. Let's say a married couple decides they want a property empire, but all in Queensland, where the land-holding tax threshold is $600,000. They could buy a unit with a land value of $300,000 in one spouse's name, another worth $400,000 in the other's, and set up a discretionary trust through which they purchase a townhouse with a land value of $550,000. Since no single entity owns more than the threshold, no land tax applies.

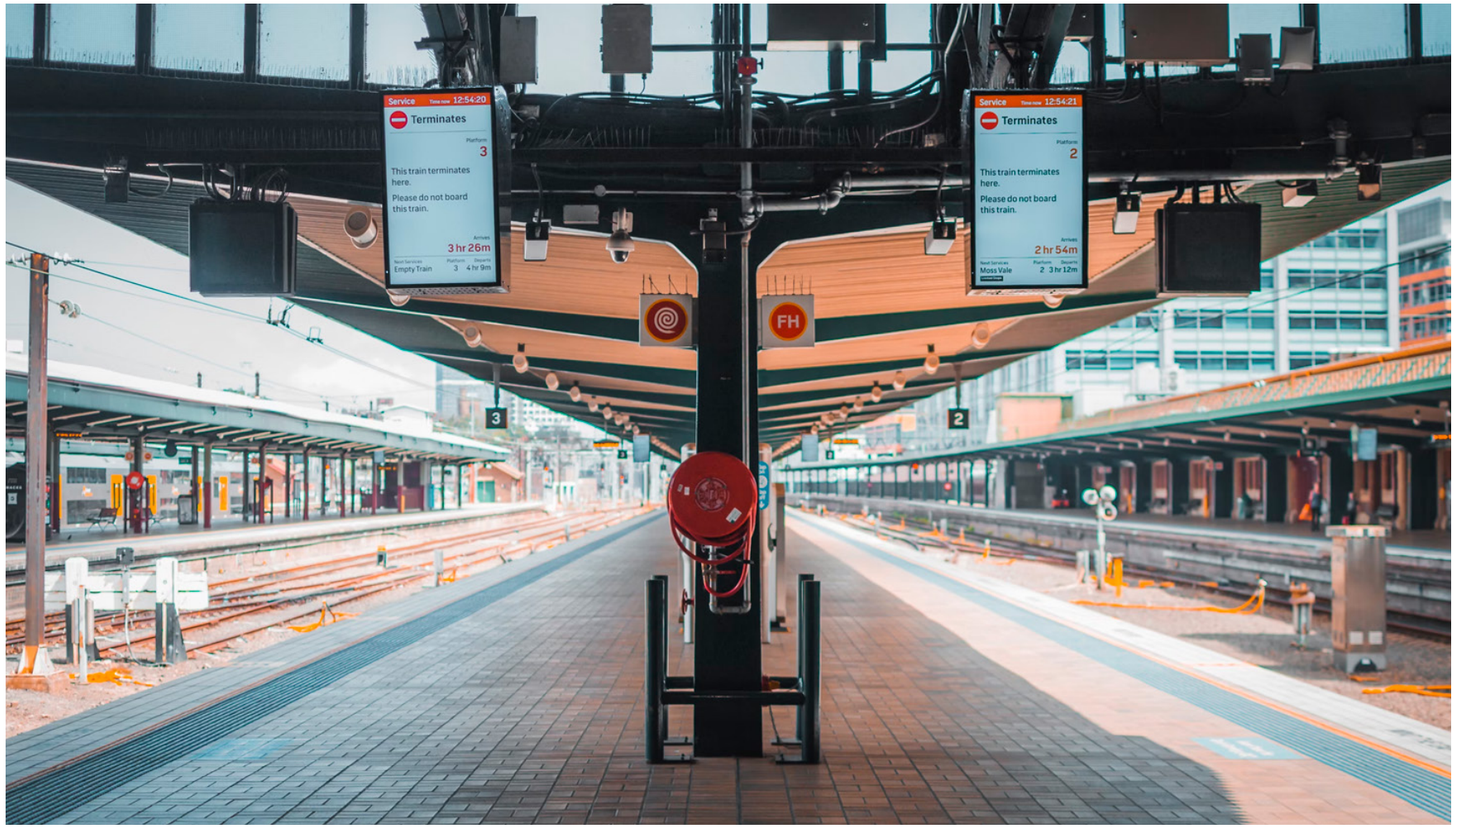
It's also worth pointing out that land tax is based on the value of the land the property sits on, not the property itself. This gives units a bit of an advantage because the portion of the property value that comes from the land is usually a lot less than houses. A $500,000 unit might only be sitting on land worth $200,000, for example, whereas the land underneath a $500,000 house is likely to be a much bigger proportion of $500,00.

DON'T FORGET THESE TAX DEDUCTIONS!

1. **PROFESSIONAL FEES.** If you've ever hired anyone to help you manage your investment property, you can claim these as a tax deduction.
2. **INSURANCE:** The ATO currently allows you to claim immediate deductions for premiums to insure your rental property i.e. landlord insurance.
3. **SMALL FEES.** Don't forget to claim the little fees, like loan application charges, bookkeeping fees, tax agent fees, etc.
4. **DEPRECIATION.** Over time, fixtures like blinds, carpets or floorboards will naturally deteriorate. The ATO allows deductions for depreciation of assets that cost over $300, over its 'effective, useful life.'

All aboard!

For investors wanting to tap into a broader tenant market, properties located near train stations are a good bet – but what must be considered? **Gerv Tacadena** reports.



LOCATION IS KEY TO ANY PROPERTY'S CAPITAL GROWTH, and one factor which can play a pivotal role in determining the value of a location is proximity to transport infrastructure, such as train stations. However, it is important to consider whether this proximity can also be seen as a downside.

The Investors Agency and DIYBA co-director Bobby Haeri said rental properties typically gain high demand when they are near train stations, which give potential tenants accessibility to other parts of the city or region.

"If there is a train line, especially a major train line, you can be sure that there are supporting transport, parking, and amenities close by which will continue to put upward pressure on housing and rent prices," he told *Your Investment Property Magazine*.

"For example, you can be confident that there will be supporting lifestyle amenities such as shopping centres, schools, recreational facilities, and parks in the region."

A classic example is the Hills district in Sydney. Property prices in this market have more than doubled in the last six years due to the development of a metro train line which cuts travel times to the city by up to 50%.

The construction of the Melbourne metro tunnel project is also a good indication of how infrastructure can help boost property values. While the project has yet to be completed, nearby suburbs such as Mandurah, Rockingham, and Warnbro are already seeing up to 40% growth in prices over the last two years.

Pure Property Investment CEO Paul Glossop said it has been a long-term trend for property within two kilometres of a major train station to see above-average capital growth.

"Regardless of which major city you are referring to, proximity to train stations with direct train links to major employment and lifestyle hubs will see the value of the land appreciate in value far stronger than areas that are only a drivable commute distance from that train station," he told *Your Investment Property Magazine*.

"Always remember that the land is the appreciating component of the asset. The density over the long-term is typically increased to accommodate more residents due to there being a scarcity of direct land within close proximity to train stations."

Properties near trains — who are they for?

Mr Glossop said proximity to train stations attracts working professionals in white-collar jobs within industries such as healthcare, finance, professional services, and government office employment.

"The benefit of attracting these cohorts of potential buyers and renters is that they typically see strong wage increases over a long-term period of time, and as such will have the ability to pay more for property and rent over the forthcoming 10, 15, or 20 years," he said.

Meanwhile, Mr Glossop said there is an ➤

➤ emerging trend of such properties having the additional benefit of being within close proximity to lifestyle corridors like waterways, beaches, major parks, and outdoor areas.

"With the emergence of a hybrid working and working from home, more people are looking for access to train lines whilst still having great access to lifestyle amenities close by where they live," he said.

"This allows them to access their place of employment during the week where required but also have close proximity to lifestyle attractions when they are not working."

Advantages and challenges

Ray White Commercial Western Sydney managing director Peter Vines said the convenience and accessibility of public transport make a market favourable to strong rental demand and therefore higher rental yields.

"Historic sales would also show that properties near train stations often experience capital growth due to demand and desirability for both commercial and residential investment," he told *Your Investment Property Magazine*.

"You also often find that there is limited stock in areas that are near train stations, which can create a supply-demand imbalance, driving up property prices."

Perhaps the biggest opportunity for properties near a train station is the prospect of urbanisation and an increase in density development in the area.

Mr Vines said train stations tend to attract businesses, restaurants and cafes, shopping centres, entertainment, and other community amenities, making the market more attractive.

"This urbanisation can absolutely impact property values further as people are often willing to pay a premium to live in an area that offers convenience, vibrancy, and access to lifestyle amenities," he said.

"Train stations are also not discriminating when it comes to demographics — in fact, they are appealing to young professionals, students, families, and retirees because we all use trains."

"Also, there is strong demand from international students and migrants who are very used to living around stations."

For Mr Vines, this broad demand helps maintain consistent demand for properties near train stations, supporting property value and a consistent rental stream.

However, there are always potential risks and challenges when investing near train stations — some risks include noise pollution, which could impact the quality of life for residents and the productivity of businesses.

"Investors should also want to explore any potential changes in transportation infrastructure because this could impact the demand in specific locations," he said.

Finding the sweet spot

Mr Vines said due diligence is needed when considering investing near a train station.

"Consider things like, is the property within walking distance to the station, are there parking facilities nearby, and is it well connected to other modes of transportation? You'd also want to explore the long-term value of the train station — are there planned upgrades and is it reliable for the community?" he said.

"I'd also explore plans for amenities and services in the area that support the appeal of the community."

Mr Haeri shared similar thoughts, adding that a property's value, demand, and sales potential are subject to the influence of multiple factors when it is in close proximity to a train station.

"If the property is too close to the train station, say less than 200 metres, then some tenants and homeowners will be deterred as there may be noise pollution," he said.

"Also, if the property does not have double-glazed windows or is a fibro dwelling, then the noise will have more of an impact."

The property is considered to be in the perfect place when tenants can walk to the station and remain unimpacted by the noise pollution.

Mr Haeri said sale prices of properties impacted by noise could be 5% to 10% cheaper.

"Properties which are on main roads or are affected by train noise take far longer to sell," he said.

"As a vendor, you might also need to discount your sale price if the market is not as hot and if buyers or renters have more options."

"Apart from this, there are no specific trends of patterns as there are too many variables such as the quality of the build, the aspect of the property, or the number of trains which go by."

Still, the type of property is also something to consider.

"If you can own a detached dwelling rather than an apartment, townhouse, or unit within close proximity to a train station, then you drastically increase the probability of capital growth due to the likelihood of council zoning laws loosening over time due to population growth," he said.

"So, if you own a house on a block of land and the zoning laws change then the value of your land drastically increases, and you increase the probability of a strong offer from a developer." YIP

Why now is the time for Australian investors to consider overseas property markets

While many investors favour domestic markets when it comes to diversifying their portfolio, investing overseas offers numerous advantages.

OUR EXPERT

DAVID WHITTING
is the Head of Property at VentureCrowd

DIVERSIFICATION IS THE GOLDEN RULE OF INVESTMENT. Whether it is across sectors and industries, companies, asset classes, borders, or time frames, the key is to balance your portfolio so exposure to any one asset or class is limited. The benefits, to name a few, include reducing risk, expanding your portfolio, creating better opportunities , and even making investment more fun.

With ten consecutive interest rate rises by the RBA, however, common means of diversification such as investing in property have become increasingly difficult.

The silver lining is that while investors tend to favour domestic property markets when it comes to diversification, investing overseas has proven to be a useful method of portfolio diversification that harnesses the power of different economic environments and popular property types.

Here's why I think Australians should consider investing in overseas properties to diversify their portfolio, especially in a time such as this.

Overseas property could be more affordable

One reason investing in overseas property is so attractive is that some overseas properties in countries such as Malaysia provide a higher rental yield with lower entry prices and barriers. Properties in popular destinations can also be used for short-term holiday rentals, as well as enable owners to use them for vacation purposes.

Investing overseas is becoming increasingly frictionless

With the laws around taxation, the language barrier, and the fluctuating currency rates, it's often difficult to understand the legalities around overseas investing. It may require an extensive amount of research for foreigners to invest in them. However, Australians are lucky to have such a tight-knit relationship with New Zealand, giving us access to investment opportunities similar to that of a New Zealand citizen.

With no language barriers, the property research, admin, and legal process is much easier. The NZD is historically pretty stable against the AUD meaning hedging may not be necessary. Additionally, Australians can invest in New Zealand properties without Stamp Duty, Land Tax, and Capital Gains Tax (CGT) on the property, and even take out NZ dollar-denominated mortgages thanks to the Closer Economic Relations (CER) trade agreement.

It can help hedge against Australian property market fluctuations

Buying overseas properties diversifies your investment because of the different currencies, markets, and laws in a foreign country. By putting your money in a completely different investment context, it has less of an impact on your investments overseas when something happens to the Australian market.

New Zealand is a great example in terms of different markets. As they are further into the market correction cycle, which is forecast to be nearing the end, the New Zealand market has the potential to emerge sooner than the Australian market.

Alternative methods for overseas investments can have a lower barrier entry to property markets

There are several alternative methods available to enter overseas property, other than traditional methods like buying whole properties to rent out or to sell at a profit. For example, crowdfunding allows investors to enter the property market more easily by enabling a wider group of people who want to invest in property but may not have the funds to do so directly with smaller amounts of money.

Other methods include Real Estate Investment Trusts (REITs), which reduce the risk associated with investing in a single property and offer much greater liquidity than direct property ownership, and Property Syndicates, which involve a group of investors pooling their resources to purchase a property, usually commercial or industrial. Syndicates usually also have lower minimum investment requirements compared to purchasing a property outright. Simply put, alternative investment methods in the modern day have, undeniably, allowed investors access to opportunities that were previously out of reach.

Investing overseas offers a wide range of benefits for Australians, especially when it comes to investing in a country such as New Zealand. When opting for the most suitable alternative approach for your real estate investment journey, it's important to take a careful approach by:

- **Fully researching the market** as well as any local laws that apply to overseas investors and ensuring that you work with lawyers and agents specialised in that market. As mentioned, New Zealand is very easy in this regard, but some countries have more barriers to investment.
- **Thoroughly analysing your investment goals** as well as your capacity to bear risk and your financial resources. This includes being aware of the tax implications of your investment in its jurisdiction (such as paying local tax on any rental income) as well as in Australia.
- **Regularly evaluate the performance of your investments** and make adjustments to your portfolio to ensure a balanced risk-reward ratio. Be aware that currency fluctuations could affect the value of your assets.
- **Using experts** who have researched or invested in those markets.

Buying property is a long-term investment, whether overseas or within Australia. But if you do your homework and get the right advice, you can end up with a very profitable and stable investment that diversifies your portfolio and helps build wealth. YIP

Australia's rental market – *where will it be in 2050?*

Our rental market has been through its fair share of ups and downs – so what will it look like in another 30-odd years?

OUR EXPERT

EMMA SLAPE
is the CEO of Turner Real Estate

AUSTRALIA'S RENTAL MARKET has changed dramatically over the last decade. Just as stock started to tighten in 2017-18, COVID delivered the final sting in the tail to contract the market to record low levels of stock and vacancy, right around the country. We are now experiencing one of the toughest housing crises in our nation's history.

Typically, the rental and sales market work in opposite cycles – when sales are strong, rentals have a higher vacancy rate and conversely, when sales are weak, the rental market is tight and competition is strong. COVID appears to have changed this as we have seen extreme pressure on stock on both sides of the market.

Before considering the range of measures that would turn the housing market around, it's important to understand the multiple factors that lead to the shortage of housing.

Australia's housing needs have been changing rapidly. In the 1950-1980s, most people's dream was to live on a quarter-acre block with a modest home, typically three bedrooms with a carport, single bathroom, and within 10km of the city. Homeownership was seen as the ultimate goal, and it tended to be younger people that rented.

Fast-forward to today and the way we live is very different. Children stay home with their parents until they are much older, couples are divorcing at higher rates, single-parent households are normal, people travel interstate or overseas for periods of time to live and work, and there is an increasing trend to share housing – either with family, friends or strangers.

It is also not everyone's financial goal to own their own property. Like overseas trends, some people would prefer to invest in other sectors, and they will happily rent for the majority, if not all, of their life.

One of the most sobering statistics from COVID is an increase in the divorce rate and interestingly, this has been most notable in the over-50 age bracket, often after a couple's children have become adults and left home. Particularly the housing sector is seeing single women seek rental accommodation in higher numbers than ever before. They are needing affordable accommodation and they rarely have considerable savings or superannuation.

The end of NRAS

The Federal Government's National Rental Affordability Scheme (NRAS) is also ending. Lauded as a solution to developing fringe areas that needed to attract middle-income workers when it was launched, the scheme rolled out over 26,000 new dwellings from 2008-2014 which were warmly welcomed (and quickly absorbed) by tenants. The scheme gave tax benefits to investors for a period of 10 years and in return the tenant was able to live in the property for 20% lower than the market rate. The negative part of this policy was that investors entered this scheme with a 10-year mindset and as the scheme has gradually ended for investors, the stock has been sold heavily, typically to an owner-occupier (as most were two or three-bedroom townhouses in the middle to outer areas). This has seen more rentals disappear from the supply side at the worst possible time (as high as 60% have been sold in some areas which have also benefited from capital growth over the 10 years).

Additionally, our migration and population figures are projected for further growth, yet housing construction and supply have not kept pace. We were already trying to live in fewer homes than ever before and with more migration, the squeeze continues.

And then finally, COVID saw many Australians return to their home country and absorb existing rental stock – or move back into properties that they offered as rentals whilst they lived away from their home state.

The perfect storm was created, and the vacancy rate has fallen as low as 0.3% in some of the capitals. Considering 3% is regarded as a healthy supply between supply and demand, we have a long way back to normality.

If we go back to the three-bedroom, single-bathroom home, we can see that this just doesn't suit the vast majority anymore. And with this, fewer people, on average, are living in a dwelling – which creates a need for more properties of differing types.

So what could these look like?

National studies have shown that there is a growing appetite from institutional investors to build higher-density living that offers small living spaces for singles or couples, with the benefit of shared communal facilities such as outdoor and indoor living areas. Identifying ideal locations for these needs a careful balance between Government and the private sector as the infrastructure needs to be right, combined with access to public transport and other key lifestyle needs for residents.

Models proposed look at long-term rentals for these residents who are seeking security but will realistically not have the opportunity to buy into the market. Models like this would attract people wanting a low-maintenance lifestyle with a community and stability. Perhaps not unlike the successful retirement homes which have featured in our community over the past 20-30 years more prominently (but without a limitation on age).

Conversely, families are looking to live together more and more, especially migrant groups who are used to this way of life and see benefits in sharing a large home to pool resources, such as older adults caring for children whilst the parents work, or students moving from overseas and creating their own community in a large home. Again, this can be a very wise use of land and resources and properties that offer such flexibility in the market experience unprecedented demand. A four- or five-bedroom home is a rarity as a rental these days, however, it is highly sought after. It offers flexibility for a range of family or community units.

And of course, there are still the traditional home types that are needed for many families and it is clear that we need more stock in this sector too. The same exists for smaller strata groups too – we just need more housing in areas that are close to services and close to major cities or regional towns.

Who will provide the houses?

The answers to providing this stock are multi-pronged. There are roles to play for ➤

➤ multiple sectors. Governments at each level need to be engaged and willing to look at things differently. There are clear projections on population growth for the next twenty years, there are many studies on community living, both locally and from experiences learned overseas. So, there is a framework that we can start some planning on. The challenges lie in bringing together the private sector and Government and then carving out different streams for housing growth.

Private landlords have long been a staple in the housing market, and they have played this role strongly. However, rising house prices have also seen many investors realise their capital gain and exit the market, in favour of more flexible investments. Often it is forgotten that the majority of private landlords in Australia are moderate-income earners who own just one rental property. They are not the wealthiest, and property is a long-term investment for them (with significant commitment both in time and capital). Being an investor also means a lot of short-term outlay for maintenance, raising interest rates, and increasing government taxes and imposts.

History would show that property investment is stable and a reliable way to build wealth, however, it is also inflexible and rigid, with high financial commitments. Unfortunately, this reality has seen many sell as the costs have increased.

‘Rent capping is a dangerous and poor policy’

So are there ways that we can change this and make property investment more attractive? Schemes such as NRAS have taught us that attracting the right investors to the market is crucial. Anything that has a finite date on it, or can produce financials that guarantee a strong financial return need to be viewed with caution as they distort the natural order of the market. We need investors who are prepared for the long term and ride the good and the bad for a strong long-term return. Scuttlebutt about changes to negative gearing and State Governments imposing further land tax regimes only make this sector of the market more nervous and provide a disincentive for those considering their next investment move.

Likewise, we need to look at tenancy laws and ensure they are fair to both parties. The introduction of rent capping - which has been debated recently - is a dangerous and poor policy. Any policy that seeks to interfere with the basic supply and demand model, for any commodity, is playing with fire. If we were to apply the same principle in reverse, when the market was weak, and landlords couldn’t lower the rent to secure a tenant, the system would collapse. A fair playing ground for owner and tenant must exist to be an attractive investment, that an owner can have confidence in.

State Governments tend to be heavily reliant on property tax to fund their budgets and this too is a concern. Rising stamp duty and land tax costs place increased pressure on investors, generally with a disproportionate increase in rent, meaning that the shortfall has to be made up by the investor. For some this is possible, but for others, it’s the last straw that breaks the back and it’s when the investor decides to exit the market. Could there be some concessions for new investors in the market to attract people into the sector? Can the State Governments look at areas of growth and incentivise investment strategies to assist with providing housing?

‘The market can, and will, control pricing’

Inflationary pressure has been seen across the board in all sectors, and housing is no different. The solution to controlling rents comes back to stock. If we rewind to 2015-17, there were high vacancy rates around the country, with some states hitting 5%. It was not uncommon to rent a property to a new tenant for 5-10% less than the previous tenant was paying for several years and properties were sitting vacant for 6-8 weeks before being let. Although this is less than 10 years ago, it is quickly forgotten and highlights that the market can, and will, control pricing. The market can also swing back the other way quite quickly, which is why careful forward planning is critical.

Institutional investors are itching to increase their presence in low-risk, stable building projects, and built in the right areas, these community-focused, high-density facilities can and will thrive. Government can provide the data to target the areas that will require this housing type and work with trusted developers to deliver quality projects that support cities and communities, rather than become empty housing projects. By engaging the target groups in these projects and bringing to life a new concept in city living, we can deliver density in a positive way.

In this space, the right parties need to be identified and brought to the table to ensure that there is genuine commitment and investment from all parties. The investors need to have skin in the game, as well as longevity on the site, to ensure a quality product is delivered and Government needs to support with infrastructure and approvals to get these projects off the ground in a timely manner.

‘Getting the balance right’

Naturally, there will always be typical development of property such as subdivisions by private investors. This has thrived in capital and inner regional areas as we seek smaller backyards and more indoor living space. Many councils have been proactive in this area to encourage this rejuvenation as it leads to more income for the local council to provide better communal spaces, footpaths, community activities, and more. There are excellent examples of this, and some councils will need to consider if more can be done to attract additional development in the future. The answer is not complete density, it’s about getting the balance right and ensuring pockets that have more development, also have some open space and that where genuine heritage and history exists, that it’s preserved too. There’s no easy solution to planning matters, but blanket policies of ‘no development’ or ‘build-up to the sky’ achieve no outcomes for the future.

Skilled labour continues to be difficult in many sectors and the building sector has been heavily hit over the past three years. The availability of tradesmen to complete building work is a genuine challenge and there is no clear pipeline of apprentices and skilled labour entering the workforce. However, with borders opening up, a review of target skills and job roles will no doubt follow, and this could be an answer to getting more people onto building sites to help complete current projects and allow builders to start planning for the next round of building – whether it’s large-scale buildings or simple homes.

The mixed-use dwelling trend

The wildcard in housing is the ‘working from home’ trend. There are buildings that are mostly empty in the capital cities, patiently waiting to see if their residents will ever return (whilst the commercial landlord is lamenting their investment in property). If the appetite is to adopt a hybrid of half at home and half at the office, there will still be a glut of commercial properties looking for company. Already, some investors are exploring the possibility of converting this to residential living, which may be a solution. However, with any housing planning, all factors need to be considered.

Who will live there, what communal facilities can be created, will there be car parking – and many other considerations. In some cases, the buildings will work as a mixed-use, in others they will not. Simple conversion however will not be the answer. The standards need to reflect what would be typically found in residential accommodation to ensure that it stands the test of time and can still be in demand, at any point in the property cycle (not just when people are desperate for rental accommodation). Mixed-use dwellings however (a combination of commercial and residential in the same building) is a growing trend and quite prominent in many new developments. So again, there are good lessons that can be learned from successful developments in how this balance can be reached.

The flip side of remote workplaces could be that communal spaces exist in large-scale apartment buildings. For example, a single person could still enjoy a small modern one-bedroom apartment for fair rent and also utilise a communal working area onsite. A positive for health and well-being and a positive for the hip pocket as they would not need to spend more on a larger apartment space to support their working arrangements. These are the types of things that people will seek, more and more, as our way of living and working continues to evolve.

What’s needed

The shape of housing will clearly change in the future, and to achieve the right balance there needs to be strong community engagement to ensure that people want to live in the areas we are proposing to build in and that they identify with the design. With a bit of creative thinking, some strong partnerships, and sharing wisdom from other parts of the world, Australia could take the lead and offer the best diversity of housing in the world in 2050. YIP

Rent caps – a disastrous policy for any state

Residential rental providers have been threatened in recent times with rent freezes, which are nothing more than a knee-jerk reaction to an issue that requires careful deliberation, consideration and longer-term solutions.

OUR EXPERT

QUENTIN KILIAN
is the CEO of Real Estate Institute of Victoria (REIV)

RENT FREEZES, OR 'CAPPING', is a method of regulating the price of rental properties.

Regulating the price of any service or product without careful long-term planning continues to be the wrong move for any market, and simply exacerbates the problem, rather than resolves it.

The aim of this policy, albeit misguided, is to make rental accommodation more affordable by limiting the amount rental providers can charge renters. Can politicians successfully do that to milk, eggs, bread, and fuel – just to name a few everyday essentials?

While there may be good intentions with this policy, the implementation of rent capping has never yielded the desired results. The two major issues are reduced supply, as rental property is no longer an attractive investment option and the deterioration in the quality of remaining rental stock.

In Victoria, almost 90 per cent of renters are renting from private rental providers. While it's essential to ensure that tenants are not unfairly burdened with rising rental costs, it's equally important to provide a fair return on investment for the owners who play a critical role in providing much-needed long-term rental properties.

Forcing the hand of rental providers and telling them how to manage their properties flies in the face of what attracts people to the market in the first place.

Despite popular opinion, 70% of Victorian property investors only own one rental property, with 43% of that group earning under $100,000 p.a. according to the ATO, so these investment properties represent the future financial planning of everyday Victorian families.

If rent is capped and cannot move with the market, investors are unable to respond to cost movements such as increasing interest rates, maintenance etc. They are very likely to take their hard-earned savings elsewhere, which is what we are already seeing as a response to the increases in Land Tax.

Rental providers who cannot charge the true cost of maintenance become unwilling to invest in maintenance, upgrades or renovations, leading to the deterioration of the quality of the rental properties.

This ultimately impacts the renters.

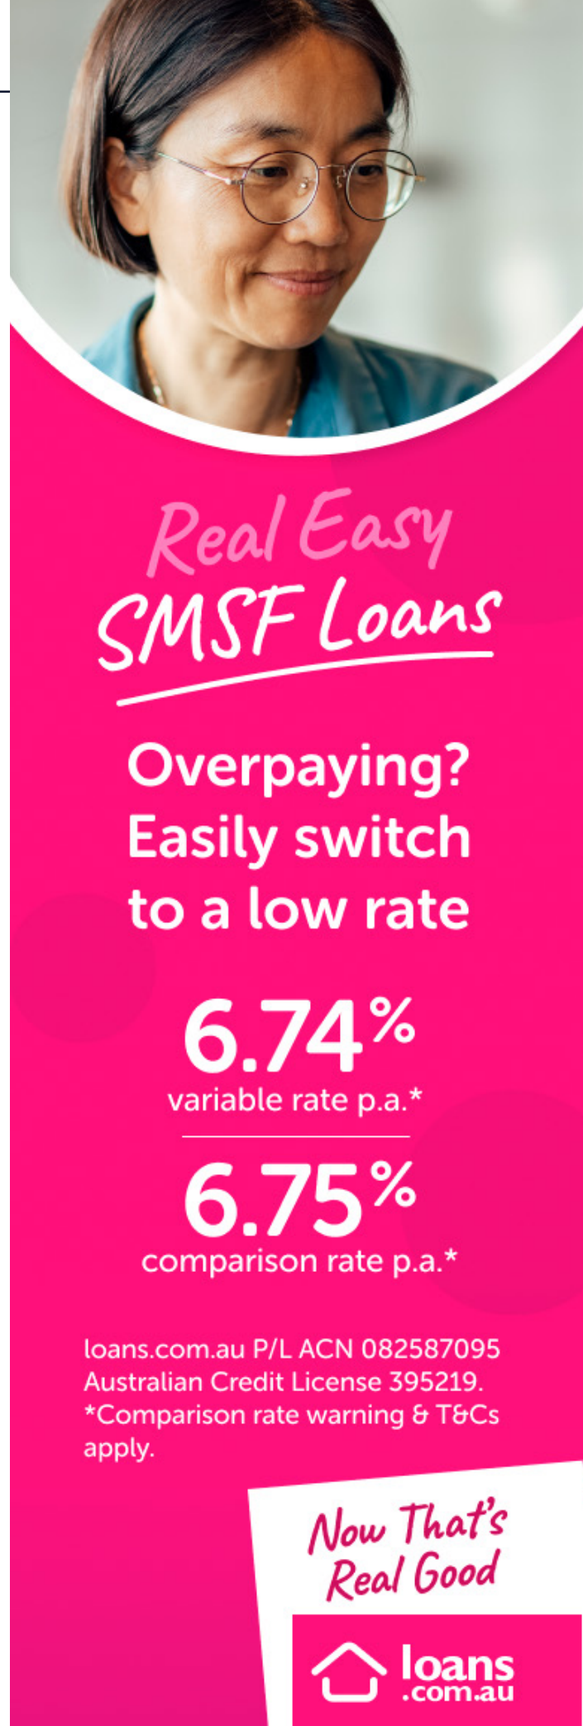
Rent capping discourages any further investment in the sector as developers and investors find it less attractive to invest in an asset with capped returns.

The entire rental ecosystem must be considered if a solution is to be identified for now and future generations. That includes the needs of renters and rental providers.

Short-term actions like rental freezes, which are not solutions, do little other than drive headlines for policy leaders and peddle inaccurate forecasting.

Victoria's rental crisis requires structural reform, not nonsensical 'quick fix' responses.

It's time the State Government comes out and says, absolutely no, to rental caps, freezes and other market interventions. .



Australian property: How to successfully navigate property investment

The Australian property market is a dynamic and ever-evolving landscape that presents both opportunities and challenges for investors.

OUR EXPERT

JOSH CHYE
is the supervisor, PropertyGuru Asia Property Awards (Australia), tax consulting partner, HLB Mann Judd

THE CURRENT MARKET IS PARTICULARLY UNIQUE with low unemployment (3.6% at May 2023), the highest cash rate for over a decade (4.10% in July 2023 from a low of 0.10% just over a year ago), and an annual inflation rate a comparatively high 7.0% at the time of writing.

Against this backdrop, property prices have been resilient, particularly in the larger capital cities of Melbourne and Sydney. In fact, due to the low levels of stock coming to market for sale, prices have been increasing in recent months.

With all this and more to consider, the Australian property market can be complex, but exploring changing laws, taxes, and economic factors will put prospective investors in a better position.

By understanding the nuances of the market and adopting a strategic approach, you can maximise profit potential while effectively managing risks.

Where to look for property

While metropolitan areas like Sydney, Melbourne, and Brisbane have historically shown strong growth, affordability is increasingly a key consideration. Therefore, exploring emerging regional centers is a sound alternative and can offer potential investment opportunities. Regions with improving infrastructure and connectivity to major cities, combined with attractive lifestyle factors, can provide strong growth prospects.

Regional centres are made a more viable option given the increase in remote working and working from home in the post-COVID environment, with a traditional CBD office no longer the only option available to workers.

Researching these emerging regional markets can reveal pockets of affordability and untapped potential.

Australia's unique property and tax laws continue to evolve

Australia has some unique tax laws that make property investment particularly attractive, such as the 50% capital gains tax (CGT) discount, negative gearing, and the CGT main residence exemption.

The Australian government has implemented several measures to regulate the property market, aiming to improve affordability and stability.

For example, in Victoria, as part of the state budget handed down in May 2023, the government has sought to reduce the tax-free threshold for land tax from $300,000 to $50,000, plus an annual land tax rise for properties exceeding $300,000.

However, there continue to be significant tax benefits available such as negative gearing, where a net tax loss on holding an investment property may offset other assessable income such as employment income.

There is also the CGT main residence exemption, which can be applied to the sale of the property for a period of up to six years (even if a local buyer initially lived in the property and rented it out).

Staying informed about these changes and their implications is essential for investors. It will allow you to understand your limitations and also help you make better-informed decisions on where you want to invest.

Personal research, along with engaging reputable legal and tax professionals who specialise in property, can help you navigate the regulatory landscape effectively and align with your financial goals and preferred investments.

Understanding economic factors

Australia's broader economic position can significantly influence the property market. The local market is currently battling inflation and consecutive interest rate rises, which collectively play a critical role in property decision-making.

Other factors to consider and understand when surveying the economic position are employment levels, population growth, and infrastructure developments as they too will play a role in shaping property demand and prices.

These are just a few economic indicators that will have an impact on different property segments and regions and can help you identify areas of growth potential.

Additionally, consider researching market trends and forecasts from reputable sources to stay ahead of the curve.

Do you know your risk assessment?

A thorough risk assessment is essential before investing in any property market. Start by evaluating your financial capacity, including cash flow analysis, borrowing capacity, and the potential impact of interest rate fluctuations.

By diversifying across different property types and locations, you can mitigate risks associated with localised market downturns.

When assessing and managing risks, it's important to have a long-term perspective. Long-term thinking is important in developing a well-defined investment strategy and one you can stick to.

Thinking about your profit potential

When considering and trying to maximise your profit potential, it's crucial to think about three key areas, including location, rental yield/cash flow, and long-term growth.

With respect to location, focus on areas experiencing population growth, infrastructure development, and employment opportunities. Urban regeneration projects and investment in transportation infrastructure can be a sign of potential future appreciation.

Regarding rental yield and cash flow, many existing property investors will know that rental yield measures the return on investment generated by a property through rental income. It is a percentage and is calculated by dividing the annual rental income by the property's value or purchase price. Rental yield provides investors with an indication of how much income they can expect to earn from their investment property relative to its cost.

It's important to evaluate your rental yields to ensure the property generates positive cash flow or aligns with your investment objectives. Rental demand

can vary across property types, so assess market conditions and target properties that meet your income goals.

And finally, give adequate consideration to long-term growth potential. Properties in areas with a history of steady and sustainable capital growth can be a safer, long-term 'bet'. It's important to consider factors such as proximity to amenities, schools, public transport, and lifestyle attractions that can drive long-term demand.

Conclusion

Navigating and understanding the Australian property market requires a comprehensive understanding of changing laws, taxes, economic factors, and risk management.

By staying informed, conducting thorough risk assessments, and adopting a strategic approach, you can have a good chance at profit potential while minimising risks.

With careful planning and a long-term perspective, the Australian property market can provide rewarding opportunities for savvy investors. YIP

NSW

Property demand remained strong in New South Wales over the past six months, with inner-ring Sydney performing well.

OVER THE FIRST HALF OF 2023, PROPERTIES IN THE INNER-RING REGIONS OF SYDNEY and those priced in the upper quartile have seen growth stronger than those in the more affordable range.

The Property Curator principal buyer's agent Brendan Clark said the continued lack of supply has seen prices in most parts of the city rise over the first six months of the year.

"The combination of very low building activity and a sharp increase in immigration will continue to put pressure on the local property market," he told *Your Investment Property Magazine*.

CoreLogic's home price index for June 2023 showed the median dwelling value in Sydney was at $1.07m — while this represents a 5.1% decline from last year, it still stands higher by 1.7% monthly and 4.9% quarterly.

Mr Clark said the rental market in the state was also able to perform strongly due to the demand from the surge in immigration.

"Rents have increased dramatically, however, there are indications that the rapid rise may be starting to taper off," he said.

"There's anecdotal evidence that more people are considering sharing a house or perhaps moving back home to save money.

"Landlords shouldn't expect the double-digit percentage increases to continue throughout the remainder of 2023."

Mr Clark said the most obvious impact of rate hikes is the reduction of how much buyers can pay for a particular property.

However, another less obvious impact evident in the first half of 2023 was the rush of buyers to purchase before the end of their pre-approval, possibly to avoid having their borrowing capacities reduced.

"This has had a real impact in terms of increasing fear-of-missing-out in the market," he said.

"In the coming months, I expect the cumulative impact of the successive interest rate increases to start becoming more noticeable — while Sydney as a whole is not showing a marked increase in mortgage stress or distressed listings, there are certain pockets that are of more concern."

For Mr Clark, a sustained pause or the end of rate hikes might see more investors tempted to enter the Sydney market, as well as nearby regions of Illawarra and Central Coast.

"The spring selling market is likely to present more opportunities for homebuyers, with more stock coming online," he said.

"Buyers who are prepared and have their finance ready will be offered more options compared to the winter months — however, with demand remaining high in most markets, it's unrealistic to expect the market to shift to being a buyer's market."

Overall, affordability pressures will likely remain an issue for both property and rental markets.

There will also be continued pressure on newer estates on the city fringes, as well as in areas in the traditional "mortgage belt".

"These areas have many households who have only recently entered the property market and haven't had a chance to build up financial buffers to help them withstand higher mortgage payments," he said.

"Whilst large-scale contagion isn't expected, these areas are nonetheless expected to face more headwinds than other parts of Sydney.

"In general, I expect the Sydney market to consolidate and likely see modest price increases at a city-wide level — I expect the premium market to outperform the more affordable areas."

VIC

Victoria has proved to be quite resilient in the face of rate hikes, as it delivers some strong results over the first half of 2023.

VICTORIA'S PERFORMANCE OVER THE PAST SIX MONTHS is proof that it is through its worst — demand is returning to Melbourne as interstate migration stabilises while house prices start to turn around from the declines.

Azure Buyers Agents director Matt Skehan said the mass exodus from Melbourne during the significant lockdowns at the height of the pandemic already stopped.

"Melbourne is benefiting from this trend along with stabilising interstate migration, in conjunction with a significant increase in net overseas migration," he told *Your Investment Property Magazine*.

Figures from CoreLogic showed Melbourne was able to record 0.7% monthly and 1.8% quarterly gains in June 2023.

However, the city's median dwelling value of $763,000 in the month was 5.7% lower than last year.

Mr Skehan said monthly and quarterly gains indicate that the market has already seen the bottom of the current price cycle.

"Prices have started to rise, supply is low, and demand is still there for quality property in areas that have high owner-occupier appeal," he said.

"This bodes well for the stability of the market for the remainder of 2023 — I don't expect to see significant price increases, nor do I expect to see significant price falls."

Mr Skehan said there remains demand for high-quality properties despite the low stock levels.

"In outer areas, if we start to see increasing stock volumes this would make me cautious about investing in those areas due to the risk of some price corrections."

For Mr Skehan, opportunities exist for investors who are looking to play the long game or to add value to their properties.

"The current market is quite two-tiered with renovated properties often fetching a premium, while properties requiring a bit more work provide opportunities for investors."

However, Mr Skehan said one thing to watch out for is the recently announced COVID-19 Debt levy, which is targeted at property investors.

"This new 10-year tax will increase the amount of accessible land tax payable on Victorian land holdings for investors and will increase the ongoing costs of property ownership," he said.

"This new tax is to start from 2024 and in time we will be able to assess the impact that this has on the housing market."

QLD

Queensland in 2023 is coming off a post-pandemic high but conditions have softened at the start of the year as rates increase.

QUEENSLAND'S HOUSING MARKET SEEMS TO BE FOLLOWING A PERFORMANCE PATTERN — after a slow start in January, purchasing peaked in March and May.

InfoTrack head of property Lee Bailie said what can be seen so far in 2023 is the softening of market conditions.

"When comparing purchase value and volume trends from the same time last year, May 2023 shows a 7% decrease compared to May 2022," he told *Your Investment Property Magazine*.

"This decline correlates with interest rate rises that really began to take effect in April last year."

Still, the price point with the strongest performance, based on sales, has been properties within the $400,000 to $500,000 range.

"However, we saw significant growth from April to May in the $500,000 to $600,000 and $600,000 to $700,000 ranges, with a month-on-month increase of 33% and 30% respectively," Mr Bailie said.

"Then leading into a decline from May to June, both these price points didn't fall as dramatically as the $400,000 to $500,000 bracket — an indication that there might be a shift on property prices, slowly towards a higher price point, leading into the second half of the year."

According to CoreLogic, Brisbane's median dwelling value posted the second-highest growth in June 2023 at 1.3%.

Despite the monthly growth, Brisbane's median dwelling value of $725,000 was 8.2% lower than during the same period in 2022.

Mr Bailie said looking at Queensland as a whole, the Gold Coast region has been a standout.

"The southern coastal areas of Surfers Paradise, Southport, Hope Island, Robina, and Broadbeach have made a consistent appearance compared to more metropolitan locations in Brisbane," Mr Bailie said.

"Residential units have proven to be especially popular on the Gold Coast."

Across the state, however, houses have shifted in popularity year-on-year, now taking 54% of the market over the first half of the year compared to 49% during the same period last year.

For Mr Bailie, while Queensland has been facing the same challenges that other states are encountering amid rate hikes and affordability concerns, a potential opportunity has emerged, particularly on the back of the uplift in listings data.

"It could indicate that there might be greater movement of properties on the market that may alleviate some of the availability issues," he said.

"There is no slowing in the demand for Queensland property either — for buyers and investors, this can pose a challenge in terms of heightened competition and property bids. For sellers, it's an opportunity to continue to take advantage of the hot market."

WA

Western Australia's house prices are recovering from a long recession as the local economy booms.

CURRENT MARKET CONDITIONS SPELL GOOD NEWS FOR PROPERTY INVESTORS looking to enter Western Australia.

InvestorKit head of research Arjun Paliwal said there seems to be a substantial interstate investment interest in the state, which presents an opportunity for further growth.

"Internal migration is another point that is improving, all while housing remains affordable in Perth even in a heightened interest rate environment," he told *Your Investment Property Magazine*.

Western Australia has been the second-largest interstate migration gainer in the past two years and it achieved the highest population growth from 2019 to 2022.

"The population growth has driven demand up significantly in both sales and rental markets in the past few years, and we estimate that the effect will continue into the coming months," Mr Paliwal said.

One factor supporting Western Australia was its affordability, which became the state's reality due to the long-term price depression in 2015 when the mining boom ended.

"As the resource prices recover, the state's local economy and housing prices have improved a lot. However, housing prices should stay at an affordable range for the rest of the year, even with some capital gains expected ahead," Mr Paliwal said.

Given its reliance on the mining industry, the state is still prone to risks.

"The state cannot enjoy an ongoing substantial increase in population and housing demand outside of Perth without a structural change in its economy — it is improving, however, it is not a change that happens overnight," Mr Paliwal said.

According to CoreLogic, Perth is the only state capital to record positive annual growth in median dwelling values in June 2023, up 2.5% to $588,000.

The number of for-sale listings has dropped by around 3% since the beginning of 2023 but sales numbers have declined by over 8%.

Despite the drop in sales, Western Australia remained strong, particularly in the low-to-middle-priced suburbs.

Some of the best markets over the first half of the year were Kwinana and Mundaring in Greater Perth.

Across regional markets, Wheat Belt - South and West Pilbara were the top spots.

Overall, Mr Paliwal said house prices in the state have a lot to catch up on due to the early stage of its current growth cycle.

"Demand is expected to remain healthy as long as no negative shocks come from the mining industry, supply levels remain low and the city continues to see strong interstate migration and interstate investment," he said.

"Supply levels are below the 10-year average, this will also be a key contributor to Western Australia's further housing price growth."

SA

South Australia maintained its resilience over the first half of 2023, with the lack of supply boosting the competition among buyers.

A COMBINATION OF EXTREMELY LOW STOCK AND HIGH DEMAND supported South Australia's performance in the first half of 2023.

Real Estate Buyers Agent Association of Australia (REBAA) South Australian spokesperson Jess Ellam said the outlook for the state for the rest of the year remains strong.

"South Australia has shown consistent growth over the years. Steady population growth, continued upgrades in infrastructure, and the lifestyle the state has to offer will all contribute to this," she told *Your Investment Property Magazine*.

Ms Ellam said suburbs along the southeast coast of the state have shown significant growth over the last two years and continued to record strong sales this year.

Meanwhile, locations within 20 to 40 kilometres from Adelaide and SA's coastal regions were bright spots.

"The southern suburbs are attractive to investors, providing them with low vacancy rates, high rental yields and great growth prospects. They're also attractive to families wanting a lifestyle change as well as interstate home buyers moving to the state," Ms Ellam said.

The Southern Expressway boost the location's appeal, as it provides easy access to the CBD.

The growing demand comes from the surge in interstate and overseas migration, with expats moving back to South Australia and international students coming back.

Ms Ellam said the effects of the pandemic had a positive influence on the interstate moves into Adelaide.

"Interstate investors are turning to Adelaide based on price point and rental returns — unlike other eastern seaboard state capitals, Adelaide offers great capital growth opportunities at lower price points, and with reasonable rental returns when compared to Melbourne and Sydney," she said.

"Interstate job relocations also account for a large proportion of buyers and renters which is pushing prices up."

South Australia provides several opportunities for investors

— a budget of $500,000 will be enough to unlock areas with good growth prospects and strong yields.

However, the main challenge buyers and investors will face is a lack of stock.

"Property shortage is driving up prices, this then creating buyer competition," Ms Ellam said.

"If buyers do not educate themselves within the current market conditions, they will find it difficult to secure a property for the right price or within their buying capacity."

Meanwhile, sellers are still in a great position to capitalise on the current market conditions and achieve a great price for their property.

Ms Ellam said the imbalance in supply and demand is a major factor affecting housing affordability, with first-home buyers struggling the get into the market.

"I am expecting this to change due to the government announcing stamp duty to be abolished for first-home buyers of homes up to $650,000. Furthermore, the increase in the cap on the First Home Buyer Guarantee to a purchase price of $650,000 will also help," she said.

"I believe Adelaide's market could potentially face a two-speed market with this stamp duty announcement — first-home buyer stock within $650,000 will likely thrive and we could see an uplift in prices for this segment of the market."

TAS

Tasmania's picturesque coastline remained a solid spot for buyers and investors alike over the first half of 2023.

WHILE TASMANIA ALSO FEELS PRESSURE FROM THE RISING INTEREST RATES, it continues to attract potential buyers given its affordability compared to other states.

Real Estate Buyers Agent Association of Australia (REBAA) Tasmanian spokesperson Samantha Spilsbury said Tasmania's quieter, laid-back lifestyle has been its biggest selling point post-pandemic.

"This has attracted retirees and young families from interstate and as a result, some properties have had added demand," she told *Your Investment Property Magazine*.

"For this reason, the prices of some properties have increased due to interstate buyers either being in the position to pay more or not needing finance and seeing the value in a property compared to what they can buy where they currently live."

Data from REBAA showed that the annual median sale price for houses increased 10.2% from last year to $612,223 in June.

For units, the median sale price increased 11.9% to $499,763.

Despite the gains in median prices, the number of sales for both houses and units fell compared to last year.

Across rental properties, vacancy rates are at a strong level of 1.3%, indicating robust conditions for investors looking to enter the state's rental market.

Ms Spilsbury said Tasmania is likely to continue being a hotspot for buyers looking for affordability for the rest of 2023.

"With stock likely to increase during spring and summer and higher interest rates restricting the borrowing power of some investors, combined with the steadying supply chain of building materials allowing for more competitive build prices and government assistance for first home buyers and low-income earners, the state should see properties becoming more affordable," she said.

"We always see a drop in properties available over winter due to Tasmania being cooler and wet in this period — going into spring and summer there will become more stock on the market for buyers."

NT

Darwin is currently in its recovery stage, but some factors foretell its vulnerability as a housing market.

NORTHERN TERRITORY'S RECOVERY FROM A LONG RECESSION PERIOD meant an opportunity for investors to take advantage of its high rental yields, particularly in Darwin.

InvestorKit head of research Arjun Paliwal said dwelling prices in Northern Territory and Darwin are now recovering from a six-month decline from August 2022 to April 2023 — by June, Darwin's median dwelling value was 0.5% higher monthly at $492,000.

"In the meantime, market activity isn't high: the number of for-sale listings is increasing since the beginning of the year and the number of sales has been declining, leading to lower market pressure," he told *Your Investment Property Magazine*.

"While we expect the recovery to be in play due to stock still being low or balanced, pressure in the market isn't very high, and so things may be stagnant here or rise mildly."

Mr Paliwal said the Northern Territory's economy is still heavily dependent on the mining industry and external investment, which is a challenge given that a drop in mineral prices and a stall in infrastructure can easily impact the housing market.

The territory's population growth is also not as robust as in other states — over the past five years, it experienced the lowest population growth, which was in line with its depressed property market.

A green shoot is a large number of significant infrastructure projects across transport, logistics, social, utilities, urban renewal, and resource sectors — this makes Northern Territory boast the highest per-capita infrastructure investment among all states.

"The infrastructure projects are expected to create 35,000 jobs, boost the territory's population beyond 300,000, improve the resilience of the state's economy, and generally enhance liveability," Mr Paliwal said.

"If all projects go well, they will help increase housing demand in the coming years."

Mr Paliwal said this is good timing for opportunistic investors to enter the market who feel their portfolio may benefit from Northern Territory holdings.

"For many investors who own properties in Darwin, it could also be good timing to get out of the market and shift to states with more sustainable economies for a more resilient portfolio if your portfolio requires this," he said.

ACT

Canberra started to lose steam over the first half of the year, as demand for property waned.

ON THE BACK OF A 45% INCREASE IN CANBERRA'S HOUSE VALUES over the last five years, it appears that there has recently been a relaxation in demand from potential buyers and investors.

Propertyology head of research Simon Pressley said a lack of real estate buyer confidence has been responsible for the decline in Canberra's house values over the last 12 months.

"Confidence has slowly improved since the start of the year, culminating in mild price growth during the months of April and May," he told *Your Investment Property Magazine*.

"At the moment, the segment of the market performing best is the home upgrader — buyers in this demographic have the maturity to maintain composure at a time when some others were fearful of interest rate rises. They are putting their equity to good use."

According to CoreLogic, Canberra's median dwelling values increased 0.4% monthly but declined 8.8% annually in June 2023, bringing the value to around $830,000, the second highest among all capital cities.

Meanwhile, Mr Pressley said across rental markets, Canberra has struggled with tapering demand, particularly over the second half of 2022.

"While Canberra has never been renowned for being a big beneficiary of internal migration, a net loss of 4,080 over the last five quarters to the end of September 2022 is a level of reduction not seen for 25 years," he said.

"This new population pattern has taken a lot of the earlier heat out of Canberra's rental market."

Mr Pressley said this led to property investors easing their investment activity in Canberra over the past year.

"Landlords seemed to be fed up with the persistent rental legislation that has already eroded fundamental asset ownership controls, along with the limitations placed on income-earning capacity," he said.

Despite this, Mr Pressley said the unprecedented private and public sector spending of the last couple of years has eased, but is still well above accepted norms.

"From a construction perspective, Canberra has been a strong performer with the supply of new homes," he said.

"Upon assessing a range of metrics, it is Propertyology's view that the Canberra property market is currently in a balanced position."

Vacancies 12 mths ago

Is the number of rental properties that were unoccupied and being advertised for rent 12 months ago.

Vacancy rate 12 mths ago (%)

Is 'vacancies 12 mths ago' divided by total rental dwellings 12 months ago, expressed as a percentage. By comparing this number with the current vacancy rate, you can see if the rental market has improved or worsened from the landlord's point of view.

Current vacancies

Is the number of rental properties currently unoccupied and being advertised for rent. Be aware that this number may be high simply due to there being a high total number of rental dwellings in that suburb.

Current vacancy rate (%)

Is current vacancies divided by total rental dwellings, expressed as a percentage. A vacancy rate of 3% is considered balanced and anything less than 2% would suggest that renting out a property in that area is easier. A vacancy rate of more than 4% is considered high and would suggest that renting out a property in that area is more difficult.

STOCK ON MARKET

This section provides an important insight into the availability of both houses and units in more than 3,000 suburbs across Australia – in other words, how easily you could buy a property in that suburb if you're looking to invest, and how easily you could sell a property you already own in that suburb if you're looking to cash out. SOM is compiled by realestateinvestar.com.au and *Your Investment Property Magazine*.

Data is the most up to date available at time of publishing – June 2023. Suburbs are listed numerically by postcode, lowest to highest.

Current houses
Is the number of houses currently being advertised for sale. A high number could mean you'll have plenty of choice if you're looking to invest, or conversely plenty to compete against if you're looking to sell. Some suburbs have hundreds of houses for sale, others none at all.

Current units
Is the number of units currently being advertised for sale.

Houses 12 mths ago
Is the number of houses that were being advertised for sale 12 months ago. By comparing this number with the number shown under 'Current houses', you can see how the level of housing stock has changed over the year. A high increase in housing stock could indicate more supply coming into the market, and a drop could mean the market is tightening.

Units 12 mths ago
Is the number of units that were being advertised for sale 12 months ago.

Change (%)
Is the change in the total number of houses and units that are currently being advertised for sale compared to the total number 12 months ago, expressed as a percentage. A positive figure would typically mean the market has more stock coming online due to seasonal factors such as the spring selling season or new housing developments in the area.

PRICE GUIDE

This section provides comprehensive statistical information on price movements for houses and units in more than 5,600 suburbs. Designed to keep you fully informed on market activity across Australia, the Property Price Guide is compiled by CoreLogic RP Data, Australia's biggest property data provider, and *Your Investment Property Magazine*.

Data is the most up to date available at time of publishing – April 2023. Suburbs are listed by state/territory, then alphabetically.

HOUSES 189

New South Wales	190
Victoria	217
Queensland	232
Western Australia	252
South Australia	262
Tasmania	272
Northern Territory	275
Australian Capital Territory	276

UNITS 279

New South Wales	279
Victoria	290
Queensland	298
Western Australia	306
South Australia	310
Tasmania	313
Northern Territory	314
Australian Capital Territory	315

Median price ($'000)
is calculated by compiling all the property sale prices in a suburb during the past 12 months and then taking the middle figure. It is a good measure to detect changes in the market by way of price movement.

3-mth growth (%)
is the percentage change in the median price over the last three months, and is a good short-term indicator of whether property prices in that suburb are currently rising or falling, although this can be volatile in nature.

12-mth growth (%)
is the percentage change in the median price over the last 12 months, and shows how the market has moved over the medium term. Anything over 10 would represent very strong growth.

Average annual growth
is the average percentage change in the median price over the last 10 years, expressed as a per-annum figure. This statistic irons out the shorter-term peaks and troughs in the market to give a good measure of long-term market performance. Anything over 7.5 would indicate exceptionally strong growth (more than a doubling in price over the full 10 years).

3-yr growth (%)
is the total percentage change in median price over the past three years. Anything over 25 would indicate exceptionally strong growth.

5-yr growth (%)
is the total percentage change in median price over the past five years. Anything over 40 would indicate exceptionally strong growth.

Weekly median advertised rent ($)
is the median weekly asking rent for listed rental properties over the last 12 months, expressed as a simple dollar figure. It is the best way to compare rental income in different suburbs.

Gross rental yield (%)
is the estimated gross rental return, calculated by multiplying the weekly rent by 52 weeks then dividing it by the median price. Beware that the rental yield goes up when the median price falls, so an increasing rental yield is not always good. You will ideally have rising yield on the back of rising prices. A gross yield of around 6 allows for both strong cash flow and growth.

Vendor discount (%)
is the average difference between the initial asking price and the final selling price.

Average hold period
is the average number of years owners hold their properties before selling. A number over 10 indicates a tightly held suburb in which stock on the market is often low; a number below five indicates a suburb with rapid turnover. A high number also suggests an area is dominated by homeowners and a lower number by investors. Typically, growth in tightly held suburbs is consistently strong over the long term and suburbs with shorter hold periods are generally more volatile.

Number sold
is the total number of houses/units sold in the suburb over the last 12 months. The number will be heavily influenced by the total number of dwellings in the suburb, so bigger suburbs tend to have higher sales and smaller suburbs could only have a handful. It also depends on the stock available in the market. So if there are only a few properties up for grabs in a suburb, naturally there will be fewer sales as well. This means you should not take this data in isolation but use it in conjunction with the other statistics to get a better picture of how active that suburb's market is.

Days on market
is the average number of days a property stays on the market in that suburb before it is sold. A lower number indicates that properties are highly sought after and quickly snapped up by buyers. A high number could mean low interest from buyers either due to unsuitable pricing or undesirable property offerings. Buyers are often turned off by properties that have been sitting in the market for longer than the average, which is three months. Typically, vendors become desperate when the property spends a long time on the market, which means buyers are in an ideal position to negotiate a hefty discount.
